To whom this may concern

**RE: CONTRACTOR REFERENCE**

Abergeldie Complex Infrastructure is a mid-tier size construction company which has many divisions in the construction industry; these include civil works, marine, railway, mining, water, wastewater, and pipe renewal. Our company is mainly based in Queensland, NSW, ACT and Victoria.

Condrill has worked for Abergeldie on a range of various projects, dated back to 2009 when Condrill performed extensive concrete cutting works at the upgrade of Lower Molonglo Treatment Works in ACT. More recently Condrill have carried out works on the following projects in ACT:

- LMWQCC Booster pump Station
- Googong Dam Thrust Block Remediation
- ACT Bridge Strengthening
- Gungahlin Bus facilities
- Corin Dam spillway upgrade works

Works on the above projects have included road sawing, concrete cutting, core drilling and joint sealing.

We have found Condrill to be a very reliable, experienced and a dedicated sub contractor. Condrill have also been proactive in exploring ideas and discussing various options to work through any complex issues that arise when removing/cutting concrete. Condrill's experience in this specialized industry has been immensely beneficial to the overall completion of each project they have worked on, for Abergeldie.

Condrill are a very safety conscious contractor, provide quality work and have experience with environmentally sensitive projects. I would highly recommend Condrill to any future clients and Abergeldie would not hesitate in using them on future projects.

Please contact myself, details below, if you require any further information

Yours faithfully

**Abergeldie Complex Infrastructure™**
